# RAILWAY TECHNOLOGY

[www.rose-systemtechnik.com](http://www.rose-systemtechnik.com)

In 1969 ROSE Systemtechnik GmbH was founded in Porta Westfalica, Germany. Today ROSE is one of the world's leading and innovative providers of industrial enclosure system engineering, employing over 350 people at the German headquarter.

In association with Phoenix Mecano AG, Switzerland, we develop and manufacture high-quality industrial enclosures and system solutions for areas such as mechanical and plant engineering, automation engineering, potentially explosive atmospheres, instrumentation, control and automation technology, as well as the foodstuff and beverage industry.

Our product range comprises the following:

- Standard industrial enclosures made of aluminum, stainless steel and plastics for individual installations of electrical connection technology and electronic components.
- Operating and display enclosures based on aluminum profile systems and stainless steel materials for HMI applications with industrial PCs, PLC control systems and visualization units, including suspension systems.
- Components for explosion protection with junction boxes and control stations for worldwide use in potentially explosive atmospheres, as well as the petrochemical and chemical industry in both onshore and offshore environments.

Our business success is based on a wide range of products, a high quality standard, constant innovation and an exceptional level of service. You decide the condition of delivery – the un-machined enclosure, a partial assembly or a completely assembled and tested customized system solution.

Take advantage of our worldwide sales and marketing network for your international projects.

ROSE enclosure systems made of polyester, stainless steel and aluminium offer a wide range of application. They protect safety and function-relevant technology and are an important part of railway technology.

## EN 45545 – Fire protection for rail vehicles

|            |                                                                                                                                         |
|------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| EN 45545-1 | General definitions and regulations governing the classification of rail vehicles                                                       |
| EN 45545-2 | Requirements for the fire behaviour of materials and components                                                                         |
| EN 45545-3 | Fire resistance requirements for fire doors                                                                                             |
| EN 45545-4 | Fire safety requirements for constructive design of rail vehicles                                                                       |
| EN 45545-5 | Fire safety requirements for electrical equipment, including that of trolley buses, track guided buses and magnetic levitation vehicles |
| EN 45545-6 | Fire control and management systems                                                                                                     |
| EN 45545-7 | Fire safety requirements for flammable liquid and gas installations                                                                     |

EN 45545-1 contains the principal terms and definitions and general regulations governing the classification of rail vehicles in operational and design categories, as well as fire safety objectives.

| Operation category      | Design category         |                                                                                                  |                              |                                            |
|-------------------------|-------------------------|--------------------------------------------------------------------------------------------------|------------------------------|--------------------------------------------|
|                         | N:<br>Standard vehicles | A:<br>Vehicles forming part of an automatic train and having no emergency trained staff on board | D:<br>Double decked vehicles | S:<br>Sleeping cars and couchette vehicles |

| 4<br>No side evacuation | HL3                     | HL3                                                                                              | HL3                          | HL3                                        |

EN 45545-2 describes requirements for fire behavior of materials and components. Those and any kind of surface treatment have to pass 4 different tests:

- lateral "spread of flame",
- concentration of smoke toxicity,
- heat release and mass loss rate and
- the smoke density.

## Polyester enclosures EN 45545 conform

ROSE GRP polyester enclosures for the railway industry are in accordance to EN 45545. They consist of a special thermosetting plastic material which neither smelters nor drops in case of fire and is characterized by a moderate smoke emission. Within a test in an accredited laboratory ROSE GRP polyester enclosures for the railway industry show excellent results in 3 of 4 test criteria and can be used in almost all rail vehicle projects.

# Aluminium enclosures

ROSE aluminium enclosures are developed for application in harsh environments. Therefore they are predestined for use in outdoor application and underfloor area on railway vehicles. Within a test in an accredited laboratory ROSE aluminium enclosures, especially the coating, fulfill all demands acc. to EN 45545 with hazardous level HL 3.

The ROSE Aluform enclosure series has been designed for use of electronics and membrane keypads. They are being used within drivers stations for operating and visualizing demands.

Within a test in an accredited laboratory ROSE Aluform enclosures, especially the coating, fulfill all demands acc. to EN 45545 with hazardous level HL 3.

AluFormPlus is an advanced version of the Aluform series and combines attractive design with sturdy protection for sensitive electronics.

AluFormPlus Highlights:

- Covered lid screws
- Integrated hinge solution
- Rectangular fixing points for pcb's in lid and base

Within a test in an accredited laboratory ROSE AluFormPlus enclosures, especially the coating, fulfill all tests acc. to EN 45545 with hazardous level HL 3.

# Stainless steel industrial enclosures

Due to the material advantages - corrosion resistance, long life cycle and robustness - stainless steel enclosures are to be used in out- and indoor railway application areas.

The basic collection consists of 27 standard dimensions – however custom made dimensions and individual designs allow various applications inside trains, on wagon roofs or in the underfloor area.

Within a test in an accredited laboratory ROSE stainless steel enclosures fulfill all demands acc. to EN45545 with hazardous level HL 3 – even if they are painted.

In addition ROSE Systemtechnik offers a comprehensive range of explosion-proof products for hazardous applications such as tank wagons.

## E30 enclosures

In case of fire protection not only rolling stock, but also railway application equipment has to fulfill special demands. For tunnel systems ROSE offers a range of E 30 enclosures acc. to DIN 4102 part 2. These enclosures are one part of the entire system for safety in tunnel systems in case of fire. E30 means that the complete electric system withstands the fire for 30 minutes for passenger evacuation. The approved design shows a special thermosetting plastic GRP material with special rail fixing system, ceramic terminals and especially listed cable glands. For further information please don't hesitate to contact us.

## We offer complete system solutions

Our service includes not only the delivery of an empty enclosure but a complete fitted and tested solution:

- Mechanical machining
- coating – either powder coating or wet paint
- engraving, pad painting or screen printing
- assembly, fitting and packaging

### **Mechanical processing – drilling, milling, punching**

All machining tasks on enclosures, such as holes, threads, milled grooves for connectors, surface milling etc., are programmed in the shortest possible time using specialised CAD/CAM software. The data generated by CAD/CAM software are transferred to CNC machines for the immediate machining of the enclosures.

### **Painting, Printing of enclosures and components**

Depending on the harsh environmental conditions that enclosures are exposed to within their respective application, surfaces are protected by chromating, passivation, liquid painting and/or powder coating. Customised surface printing is carried out in-house using screen printing or pad printing procedures.

### **Assembly, fitting and packaging**

Our declared goal is to provide our customers not with a particular assembled component, but with a complete product. As a result, enclosures are usually fully machined and equipped before delivery with, mounting rails, terminal blocks, communication systems and cable glands.

### **Engraving – permanent marking**

When using the enclosures in harsh environmental conditions and if permanently legible markings are required, enclosures and control units can be engraved and covered with special paint.

In the case of application which are not covered by our standard range, or for special design requirements, we can provide your customspecific enclosure design.

We will be happy to assist you with any special needs!
