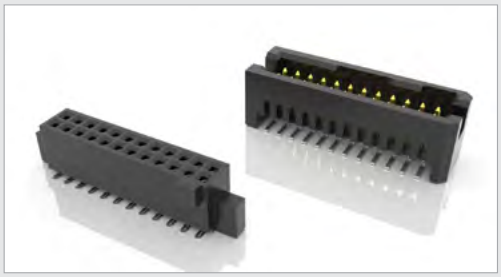
Several of our products will undergo additional testing to ensure they are more than suitable for industrial, military, automotive and other extreme applications.



TESTING WILL INCLUDE:

- Higher mating cycle testing
- Intense shock and vibration
- Altitude testing
- ESD testing
- Temperature cycling
- And more

PRODUCTS TO BE TESTED:

- Rugged Tiger Eye™ connectors
- Hermaphroditic Razor Beam™ connectors
- SEARAY™ high-density arrays
- Edge Rate® rugged signal integrity connectors
- AcceleRate® HD ultra-micro connectors
- Ultra Micro Power systems
- High-speed coax and twinax cable assemblies

Please contact set@samtec.com for more information and test results when available.

EXTENDED LIFE PRODUCT™

E.L.P.™ products are tested to rigorous standards, which evaluate contact resistance in simulated storage and field conditions.

- 10 year Mixed Flowing Gas (MFG)
- High Mating Cycles (250 to 2,500)
- Certain plating and/or contact options will apply
- For complete details on Samtec's E.L.P.™ program, a list of qualifying products and test results, please visit samtec.com/ELP or email the Customer Engineering Support Group at ASG@samtec.com

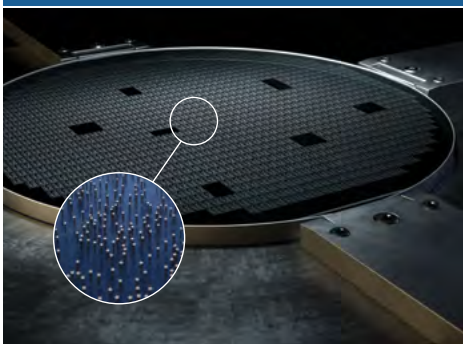
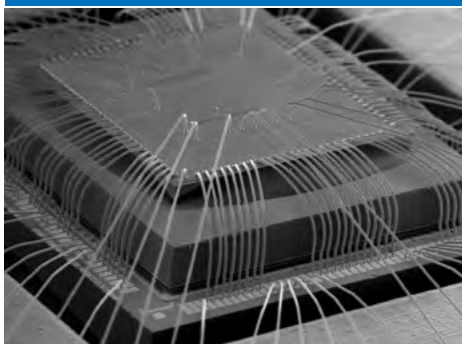
Glass Core Technology



Advanced Packaging & Assembly



Next Gen 2.5D / 3D Packaging

THE FUTURE OF IC PACKAGING AT 56 Gbps & BEYOND

Integrated Stacking: 2.5D & 3D Packaging

As miniaturization and integration demands increase, the concept of stacking microchips is gaining more traction; stacked chips offer the benefits of electrical efficiency, less heat and power, and increased bandwidths. Samtec's proprietary Glass Core Technology enables solutions to aid in the development of these next generation packages.

- Because microchips require micro bumps, which are too small for direct attach to typical substrates or PCBs, 2.5D & 3D packaging is much more challenging
- Using glass as an interposer between the microchips and package substrate is an ideal solution, as it can be used to convert the top side micro bumps to fine pitch BGAs on the bottom side
- Additional benefits of using glass include increased signal integrity, active interposers, fine pitch / high-count I/Os, and mixed chip technologies with common bumping, and endless possibilities for integrated stacking
- Other end product applications for glass include CMOS Imaging Sensors (CIS), high-performance RF packages, SiPho packages, high-speed multichip modules and system-in-packages
- Contact Samtec's technical experts at sme@samtec.com to discuss your design needs
